

City as Code: The Urban Operating System

5 Counter-Intuitive Rules for Building the 'Complete Neighbourhood'

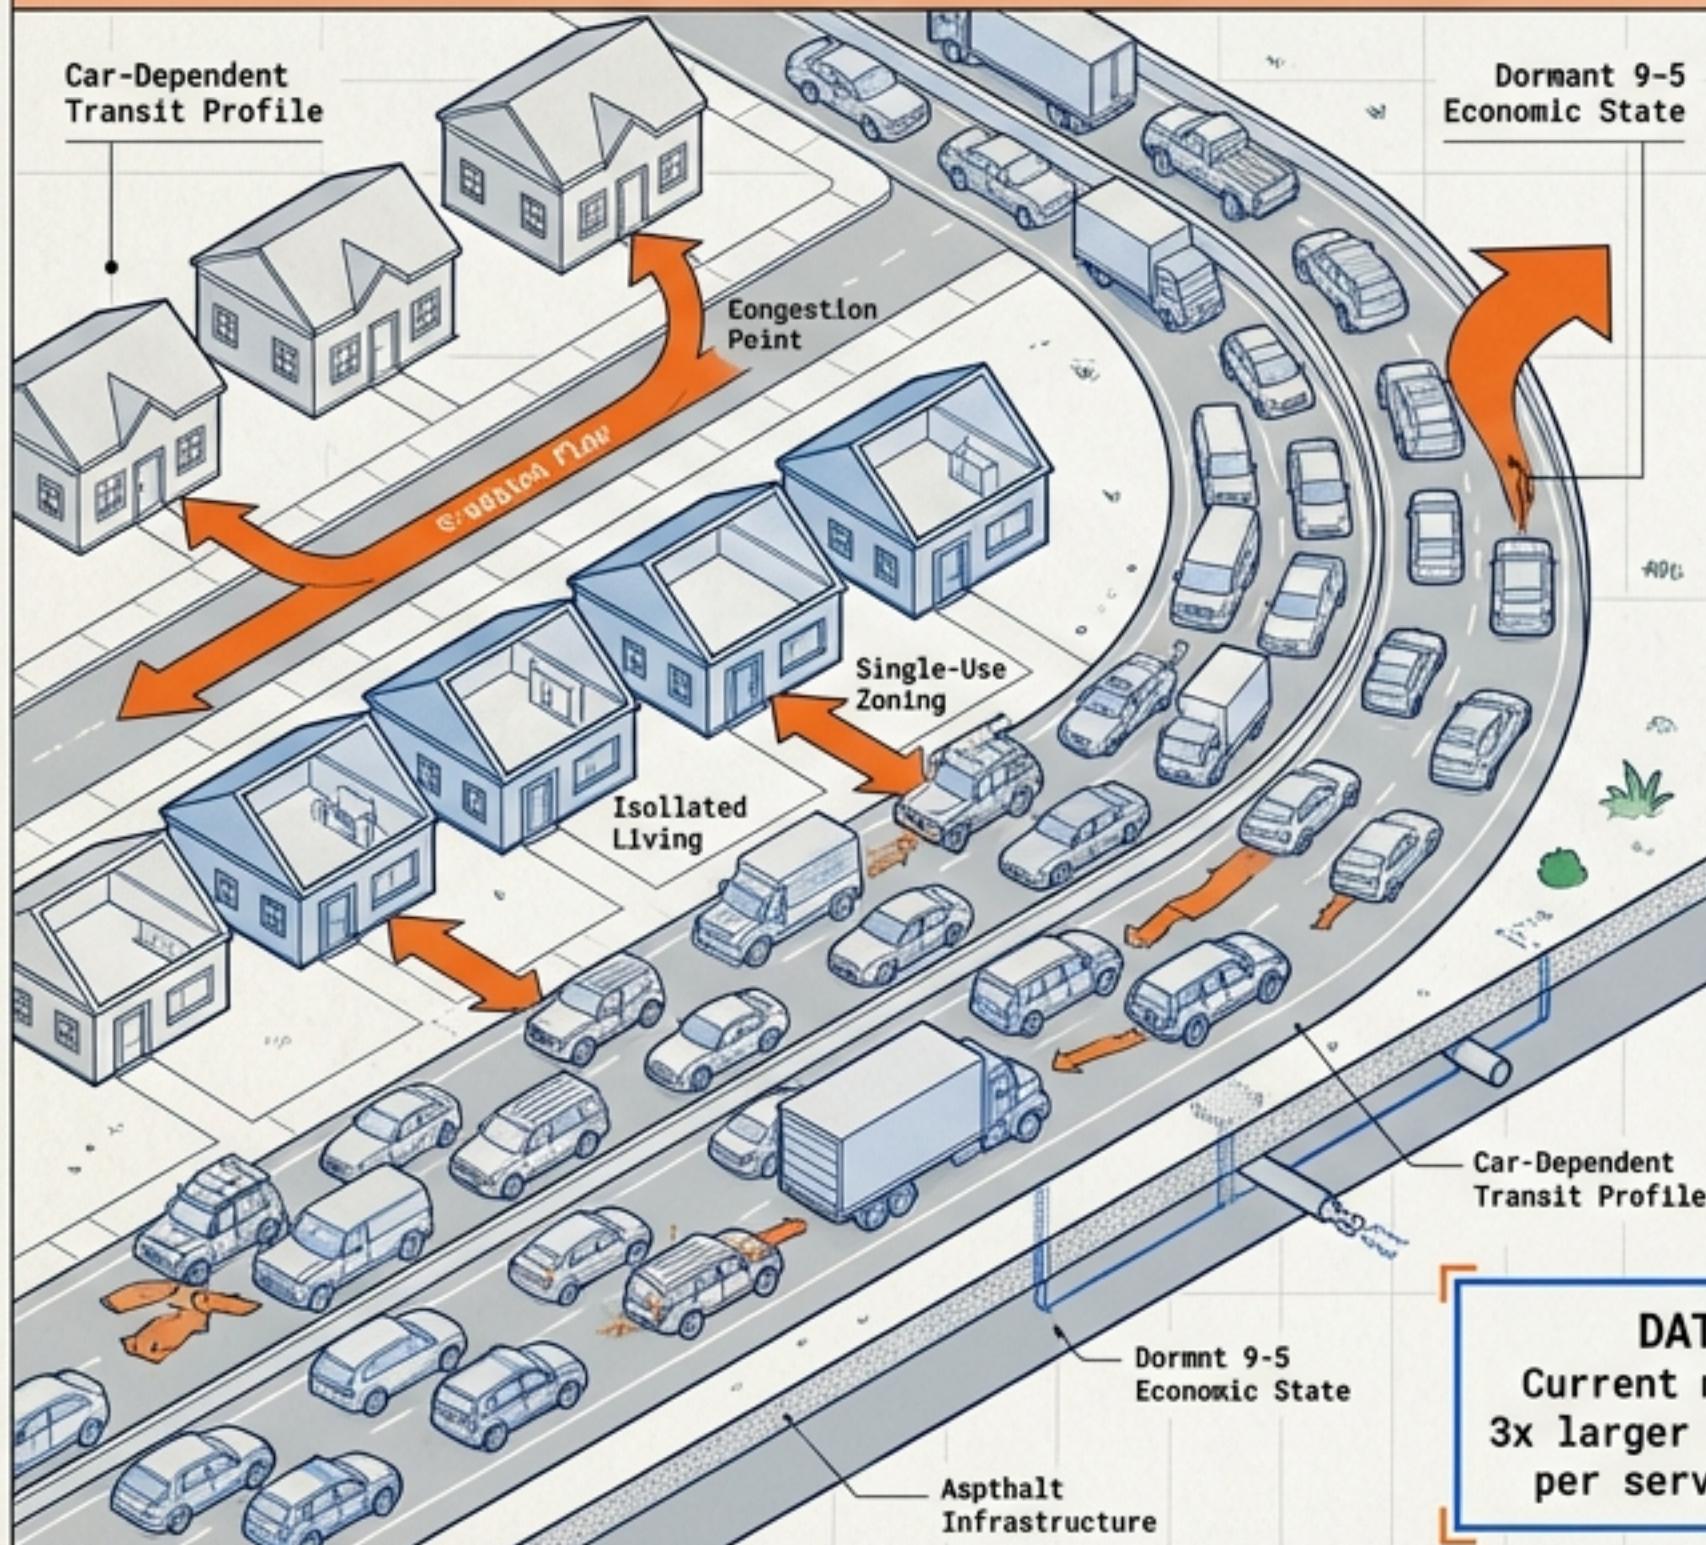

A Synthesis for Decision Makers | Based on the Aotearoa Planning Bill 2025

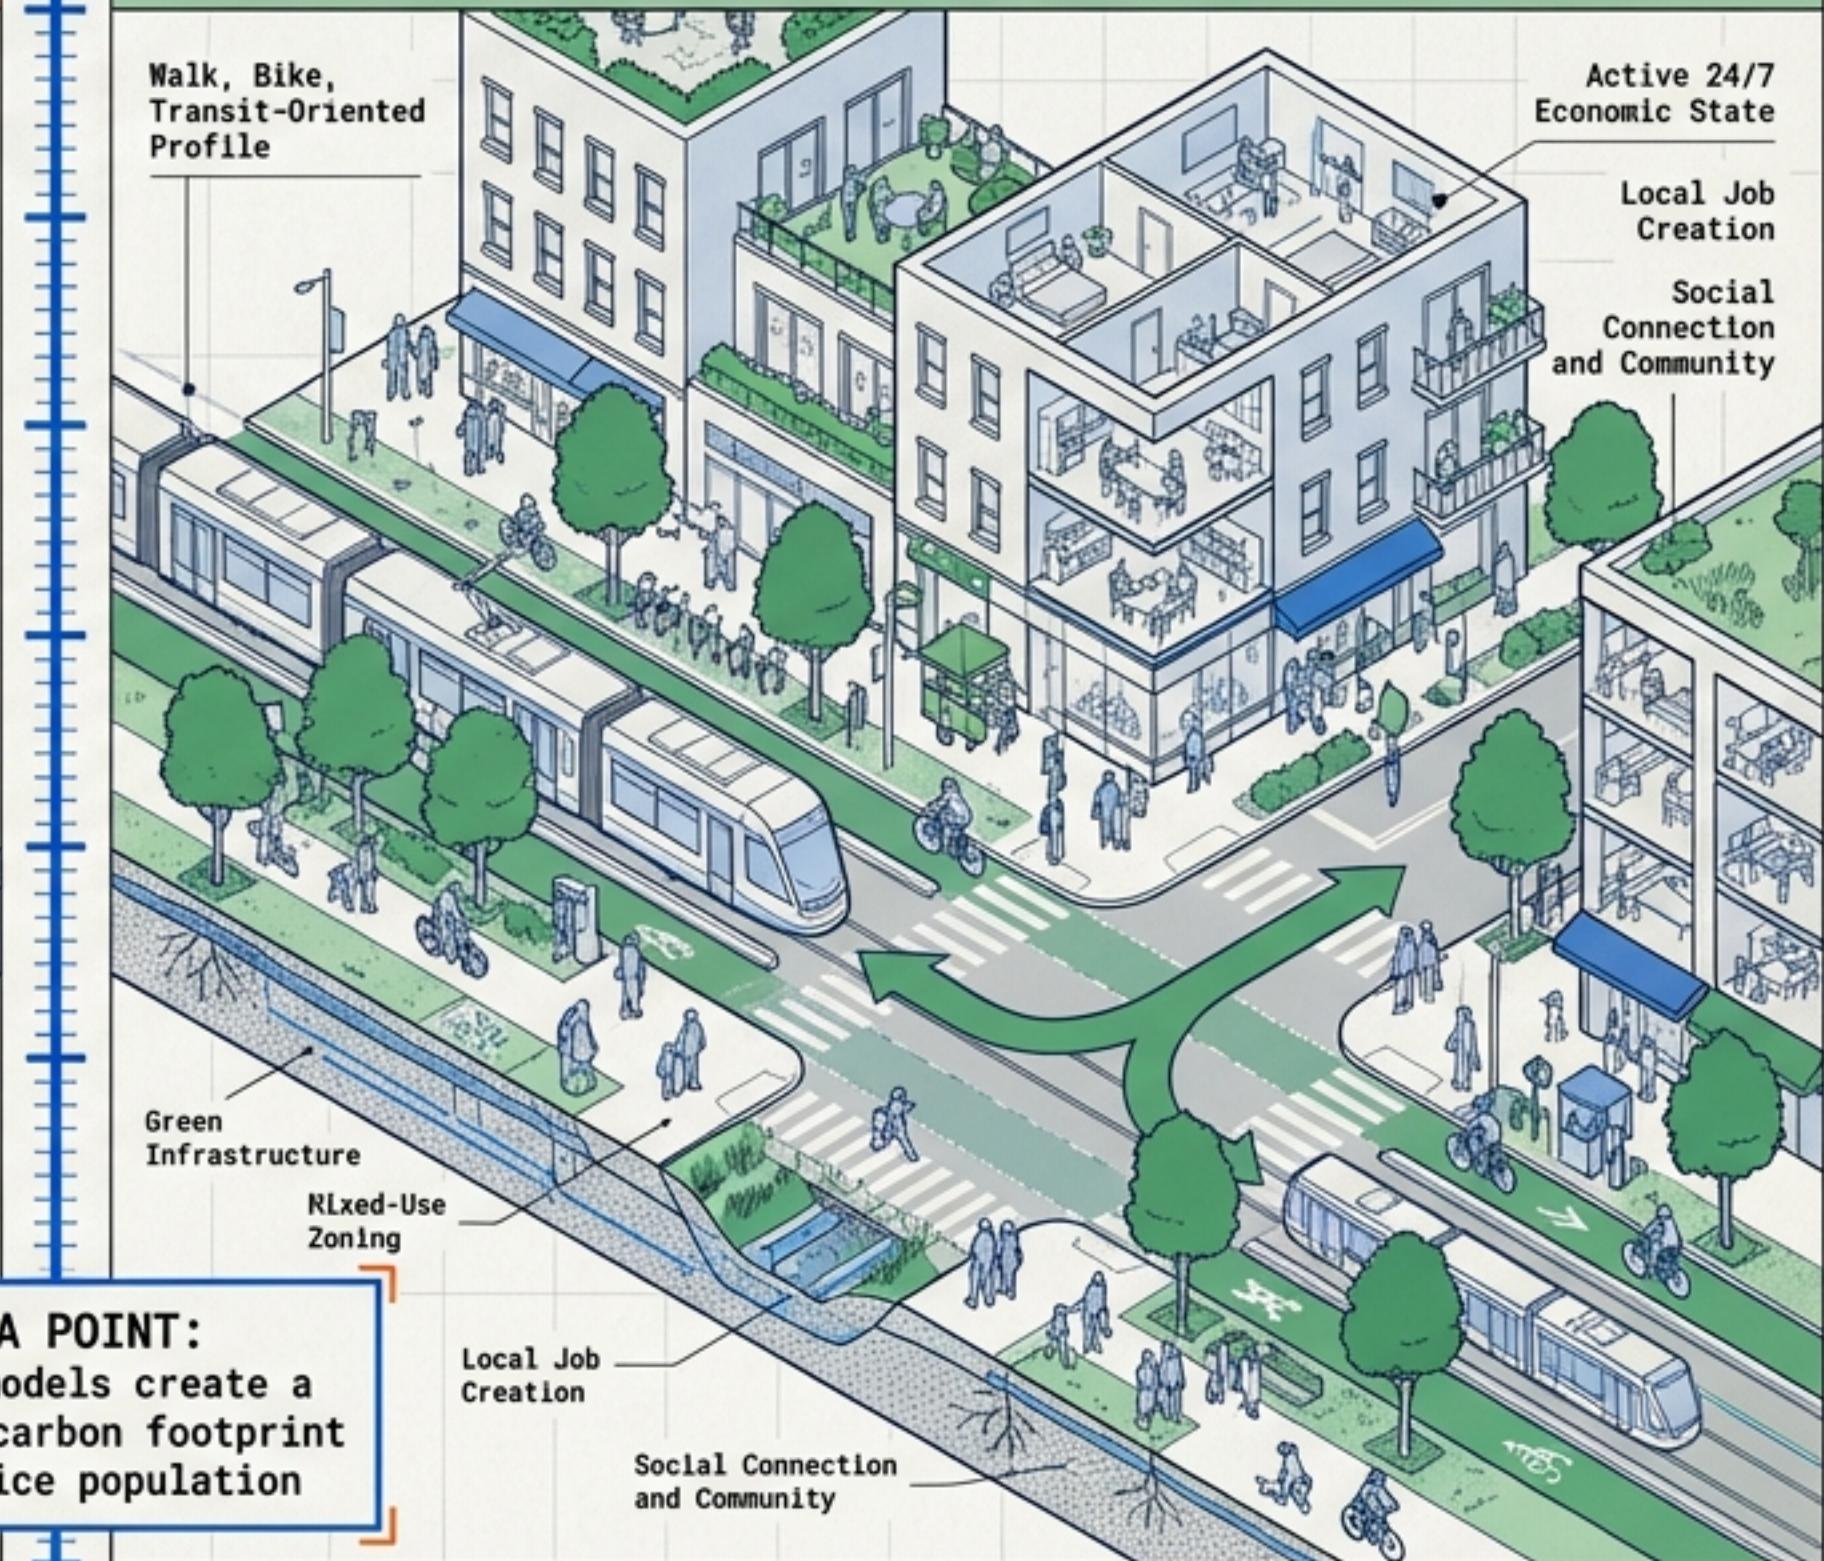

Is Your City Running on 'Buggy' Software?

The “Dormitory Suburb” vs. The “Complete Neighbourhood”

Status Quo: Storage for People (Negative Productivity)

Future State: 24/7 Ecosystem (Everyday Life Localized)

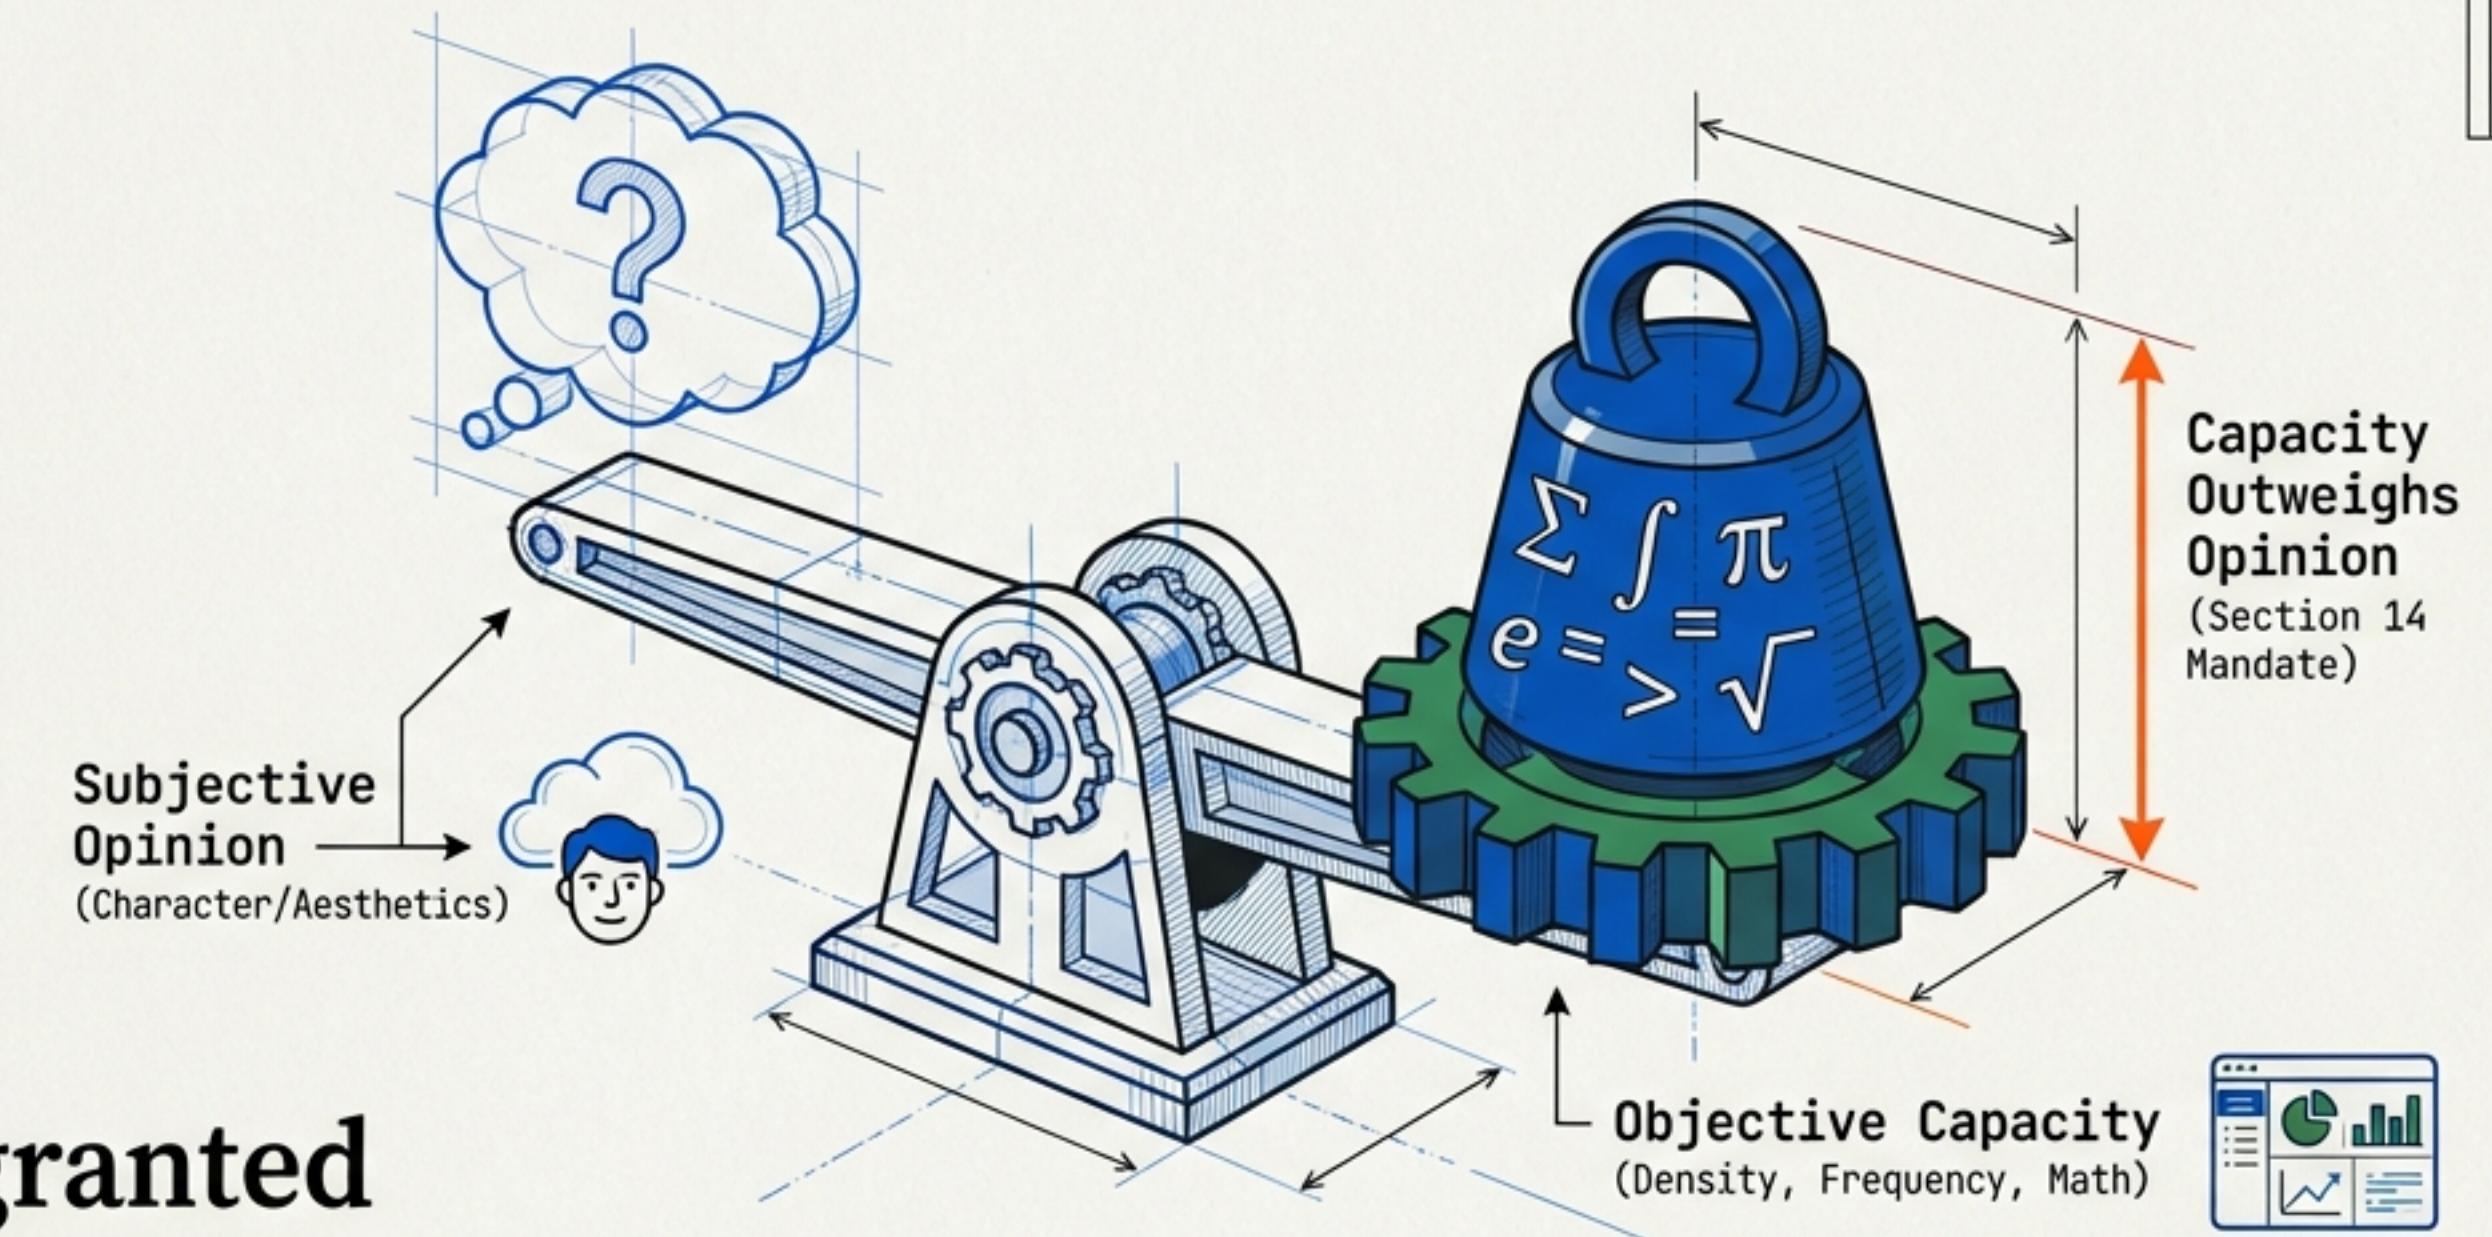

DATA POINT:
Current models create a
3x larger carbon footprint
per service population

1. Stop Arguing About 'Character'. Start Measuring Capacity.

The Shift from Subjective Opinion to a 'Culture of Adherence'

For decades, cities were choked by vague aesthetic **opinions**. The new OS replaces this with the **"Section 14 Mandate"**:

Permission to build is now **"As-of-Right"** based on objective math.

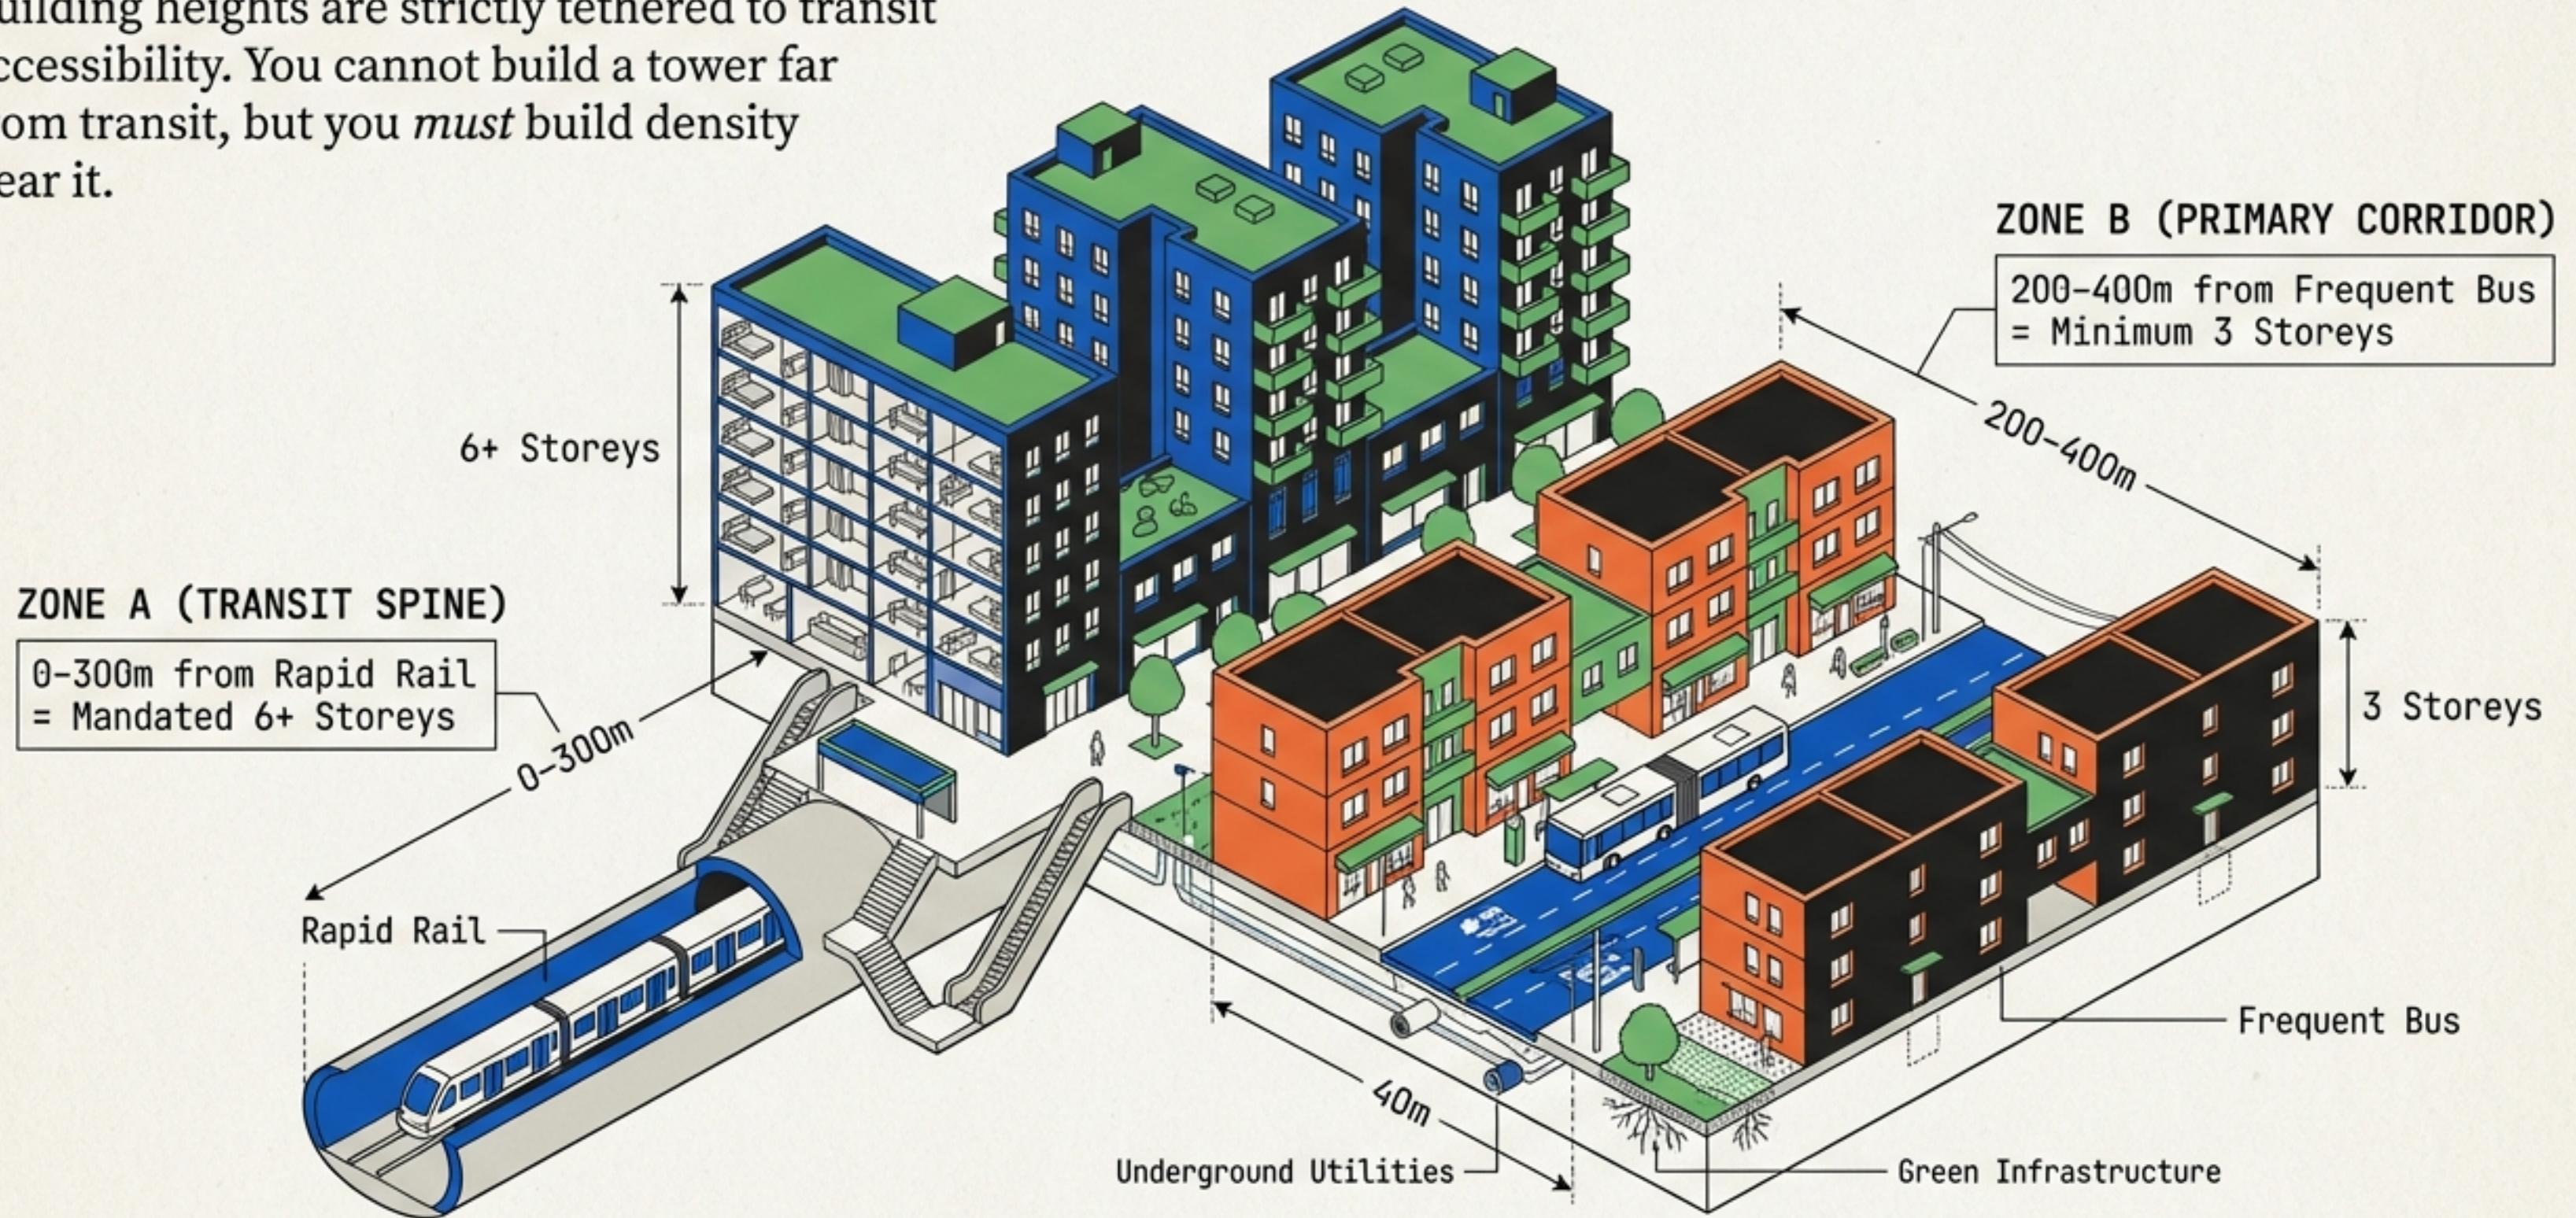

"Permission is granted based on mathematical standards... not on someone's subjective opinion about aesthetics."

The Logic: Density Follows Frequency

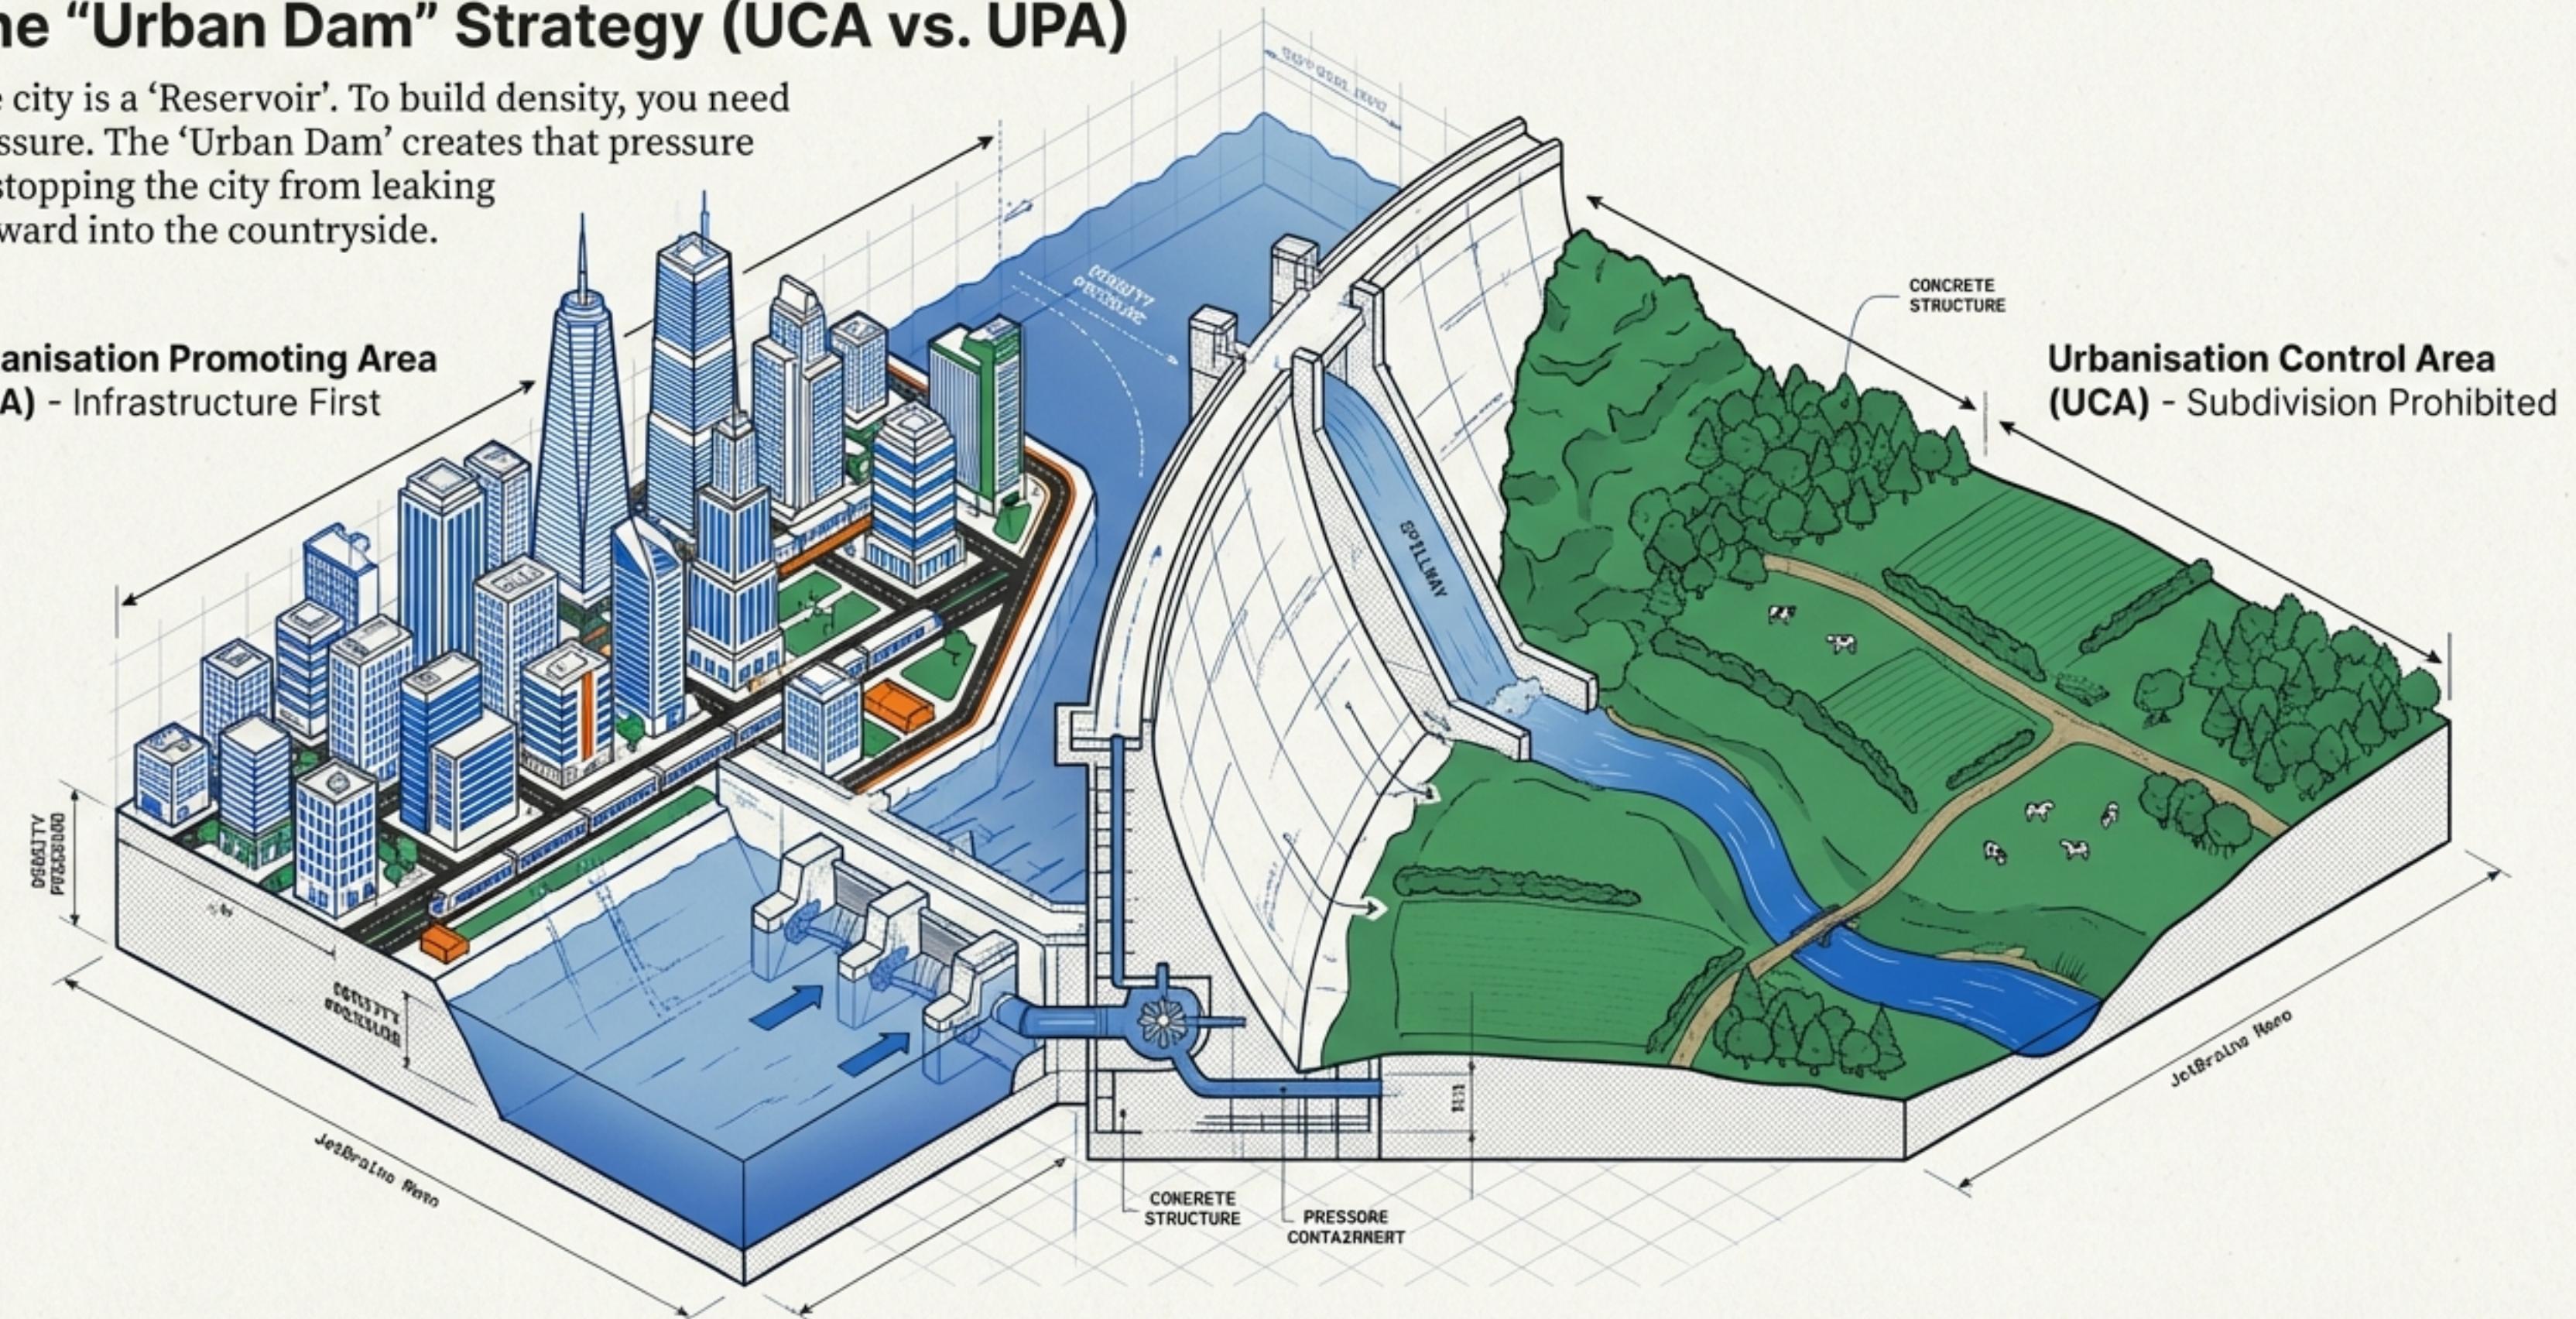

Building heights are strictly tethered to transit accessibility. You cannot build a tower far from transit, but you *must* build density near it.

2. To Save the Farm, You Must Contain the City.

The “Urban Dam” Strategy (UCA vs. UPA)

The city is a ‘Reservoir’. To build density, you need pressure. The ‘Urban Dam’ creates that pressure by stopping the city from leaking outward into the countryside.

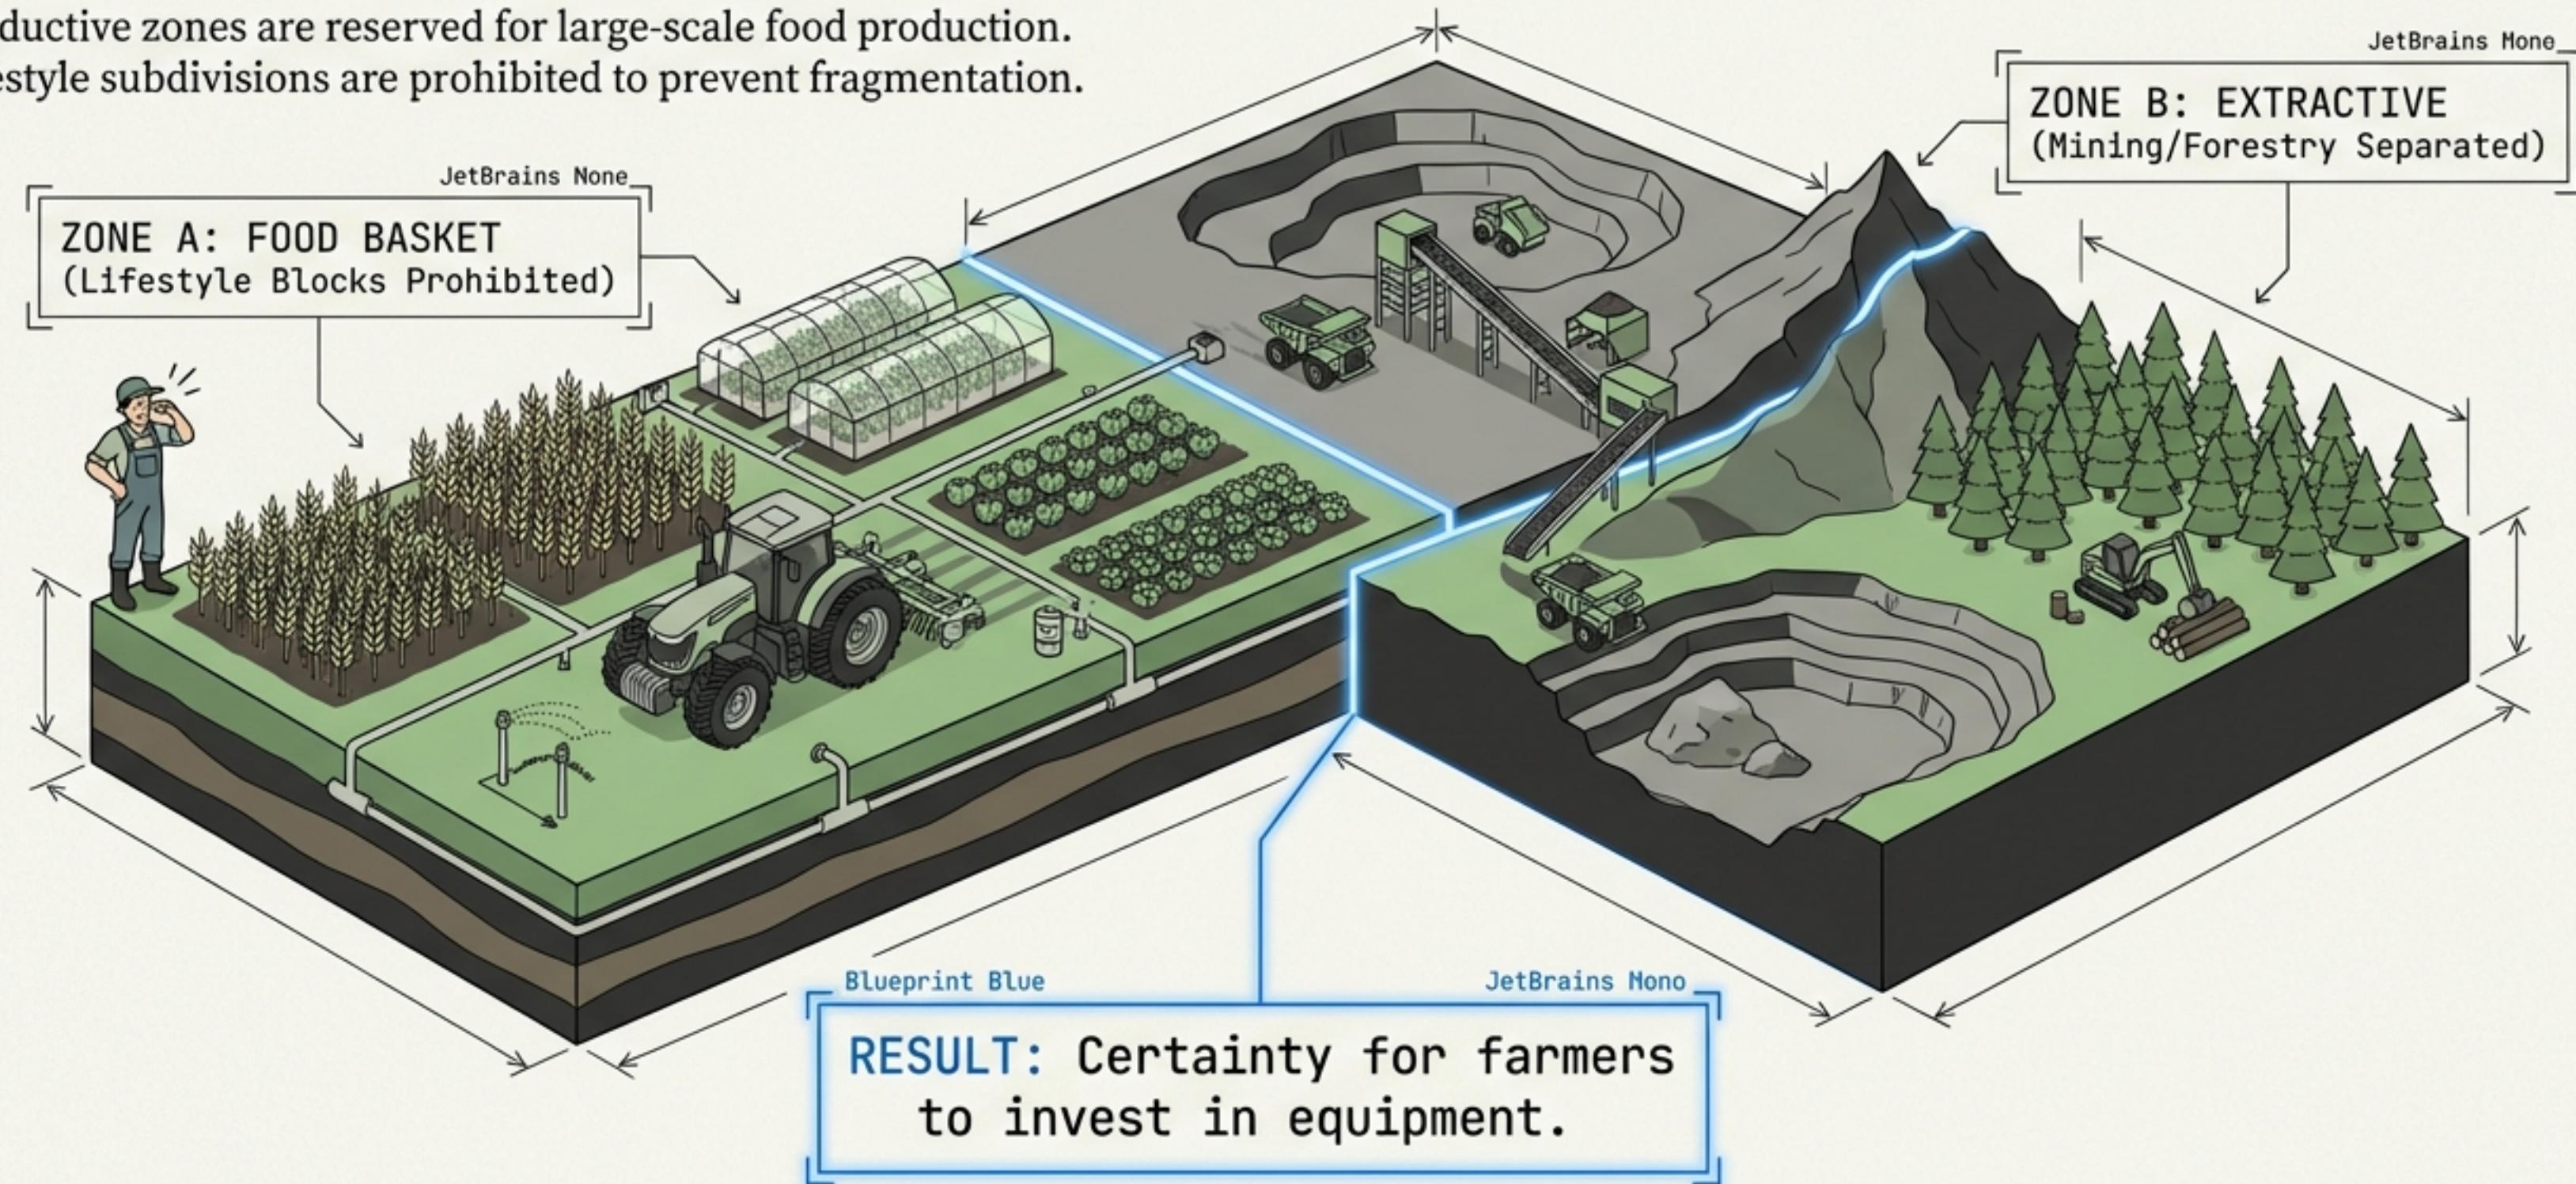

The End of the “Lifestyle Block”

Rural Land is a Strategic Asset, Not a Waiting Room for Suburbia.

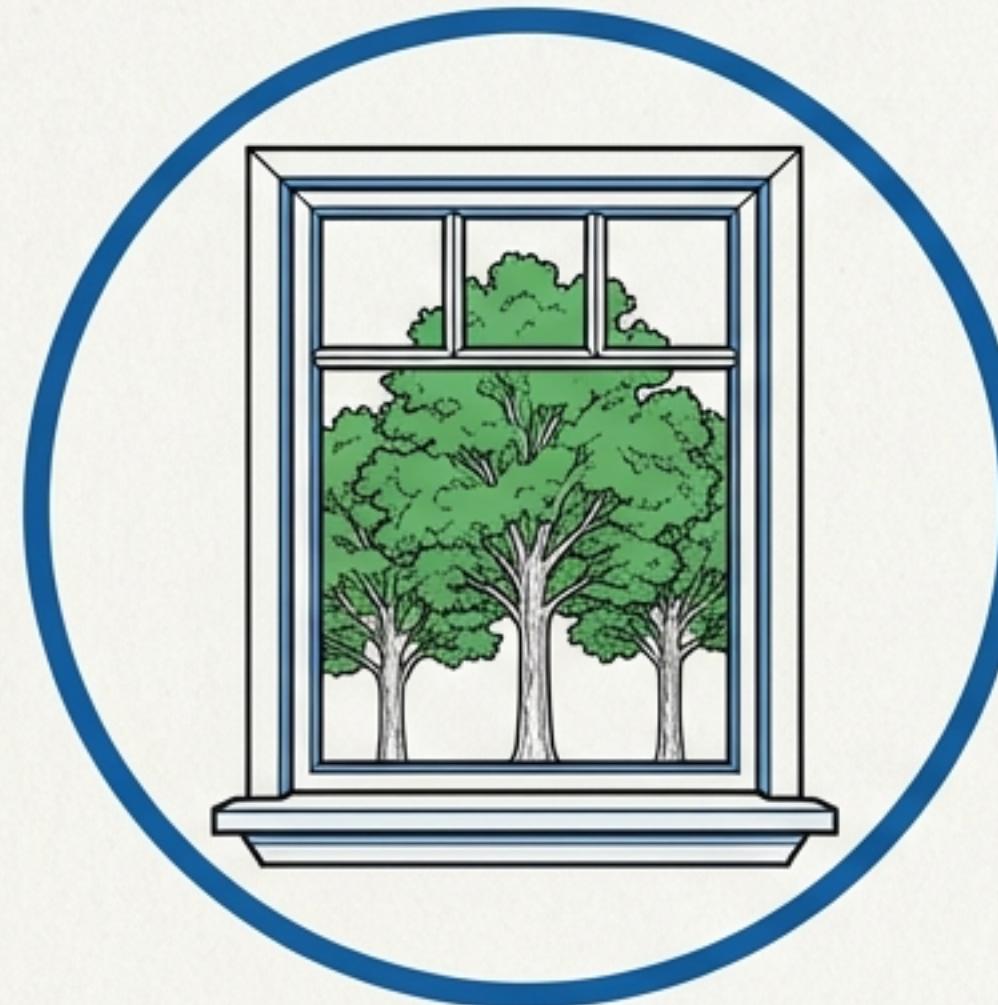

Productive zones are reserved for large-scale food production.

Lifestyle subdivisions are prohibited to prevent fragmentation.

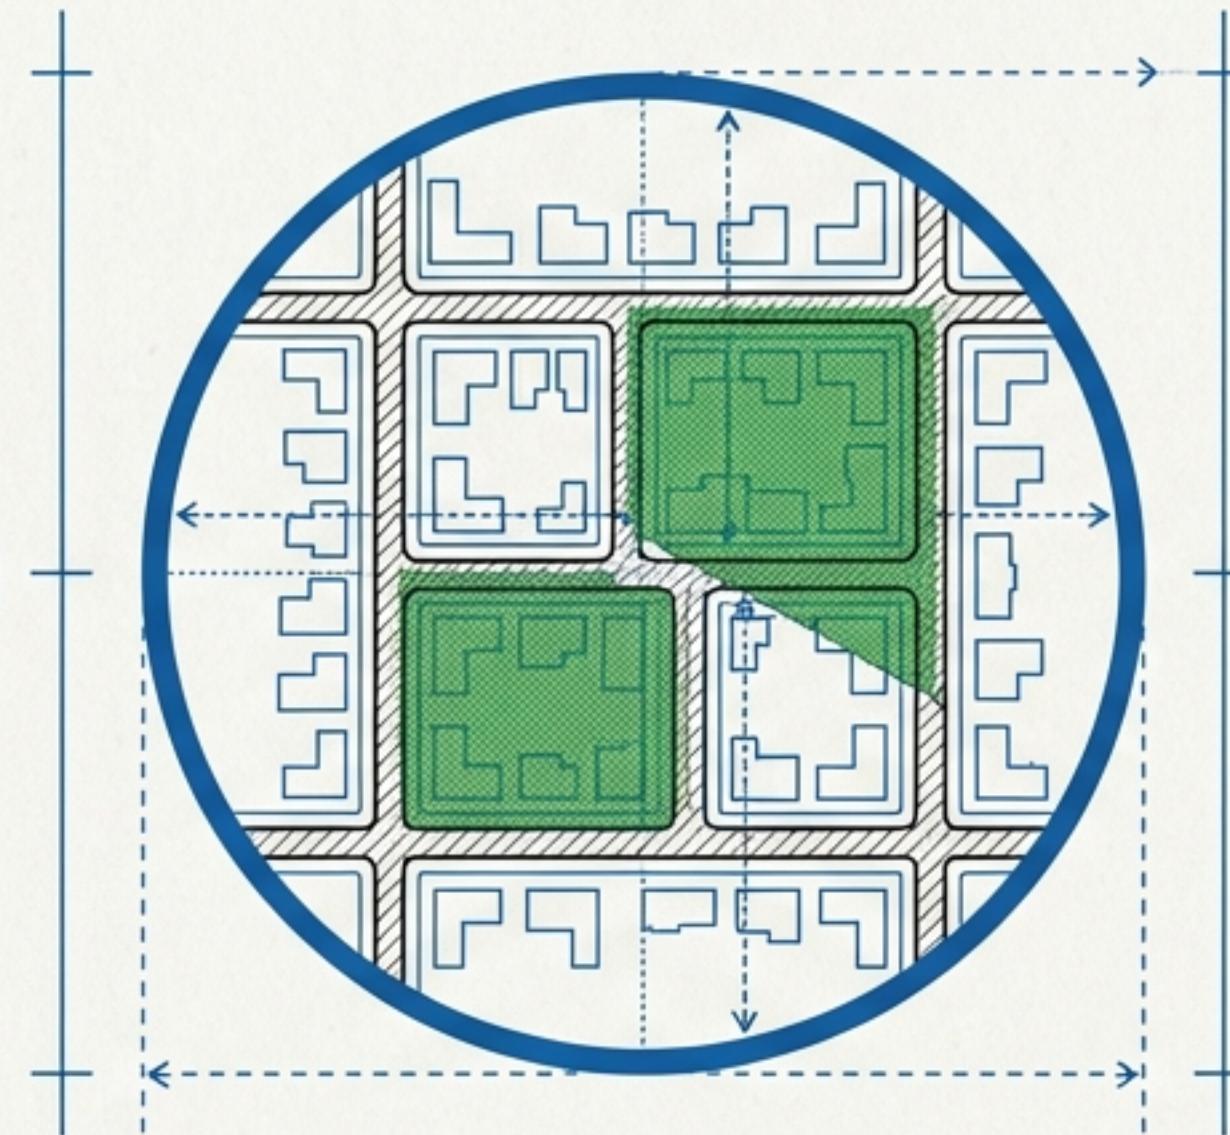

3. Nature is Not Decoration. It is Infrastructure.

The Biological Mandate

3 TREES
visible from every home
(Mental Restoration)

30% CANOPY
cover in every neighborhood
(Heat Mitigation)

300 METERS
max distance to a park
(Social Resilience)

The ROI of “Sponge Cities”

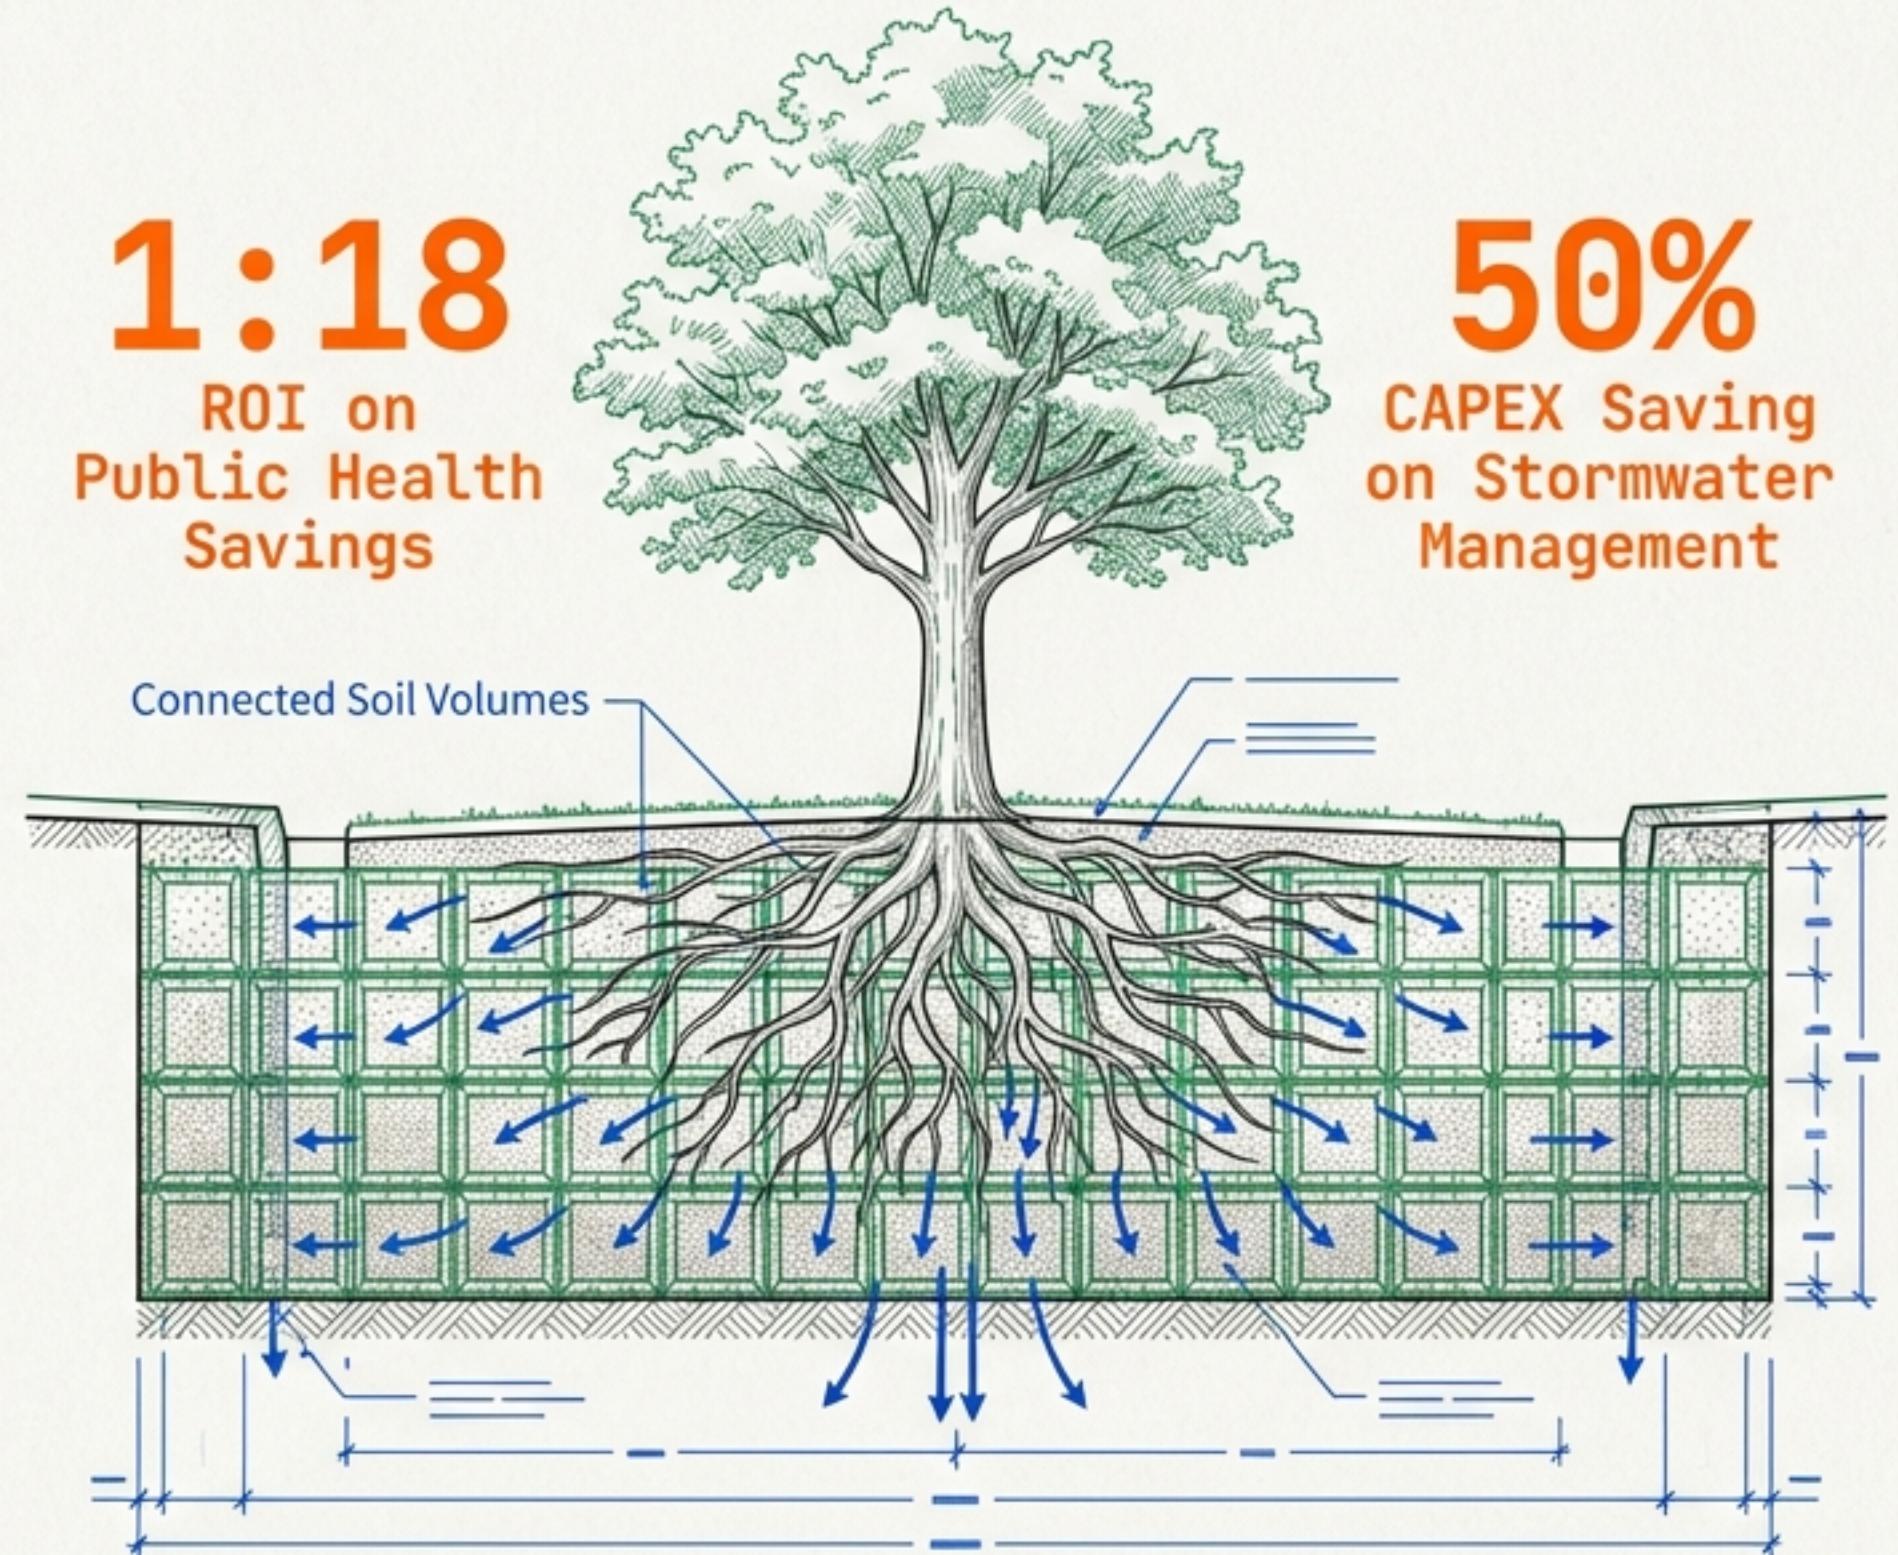

Why decision makers
should care: It's cheaper
than pipes.

ROI on
Public Health
Savings

50%

CAPEX Saving
on Stormwater
Management

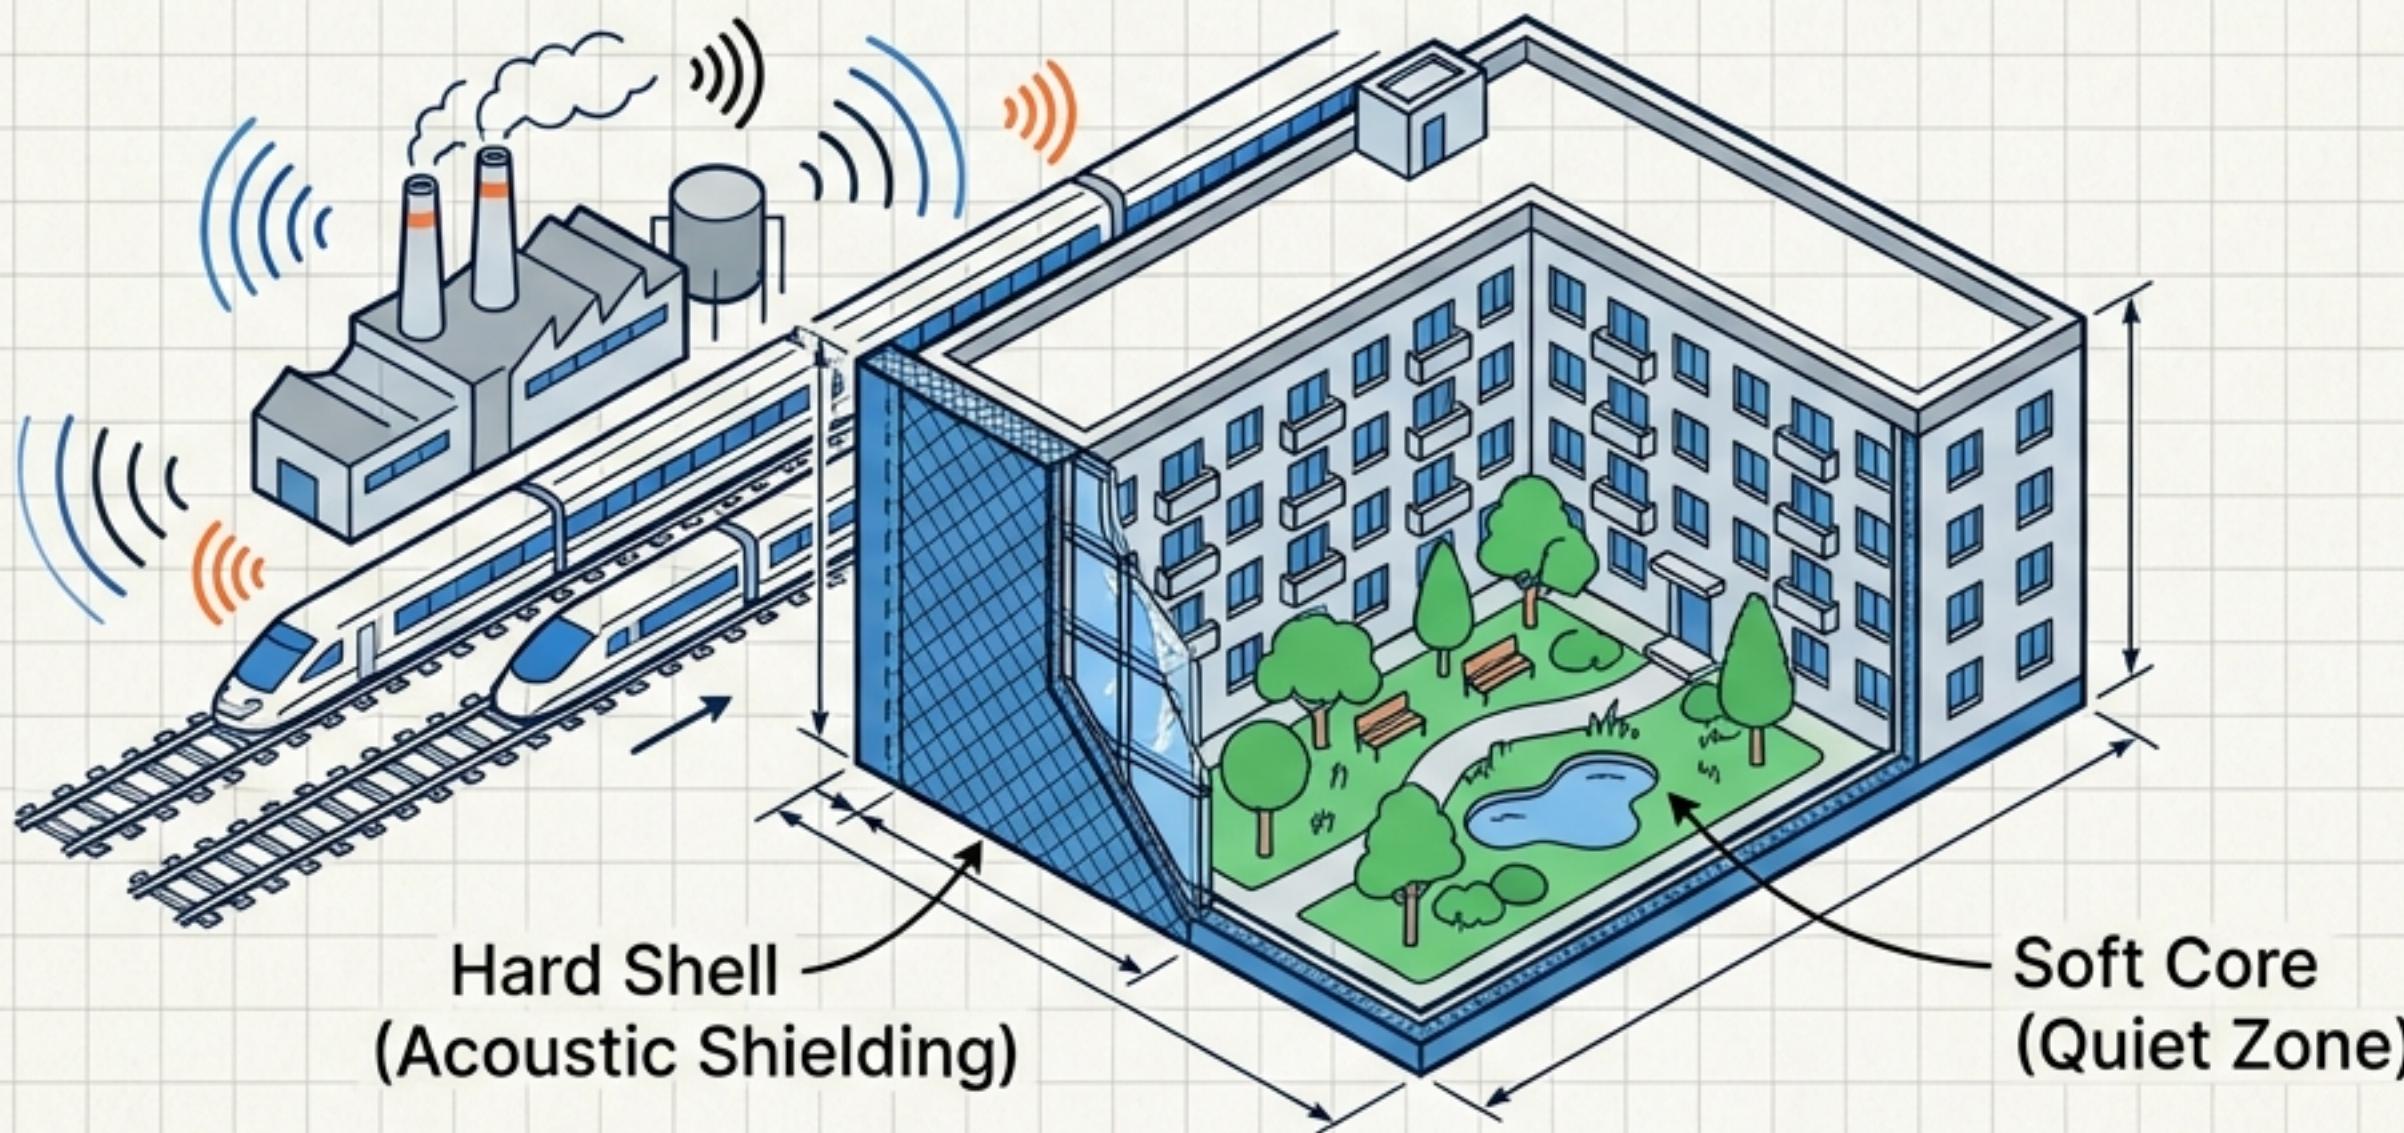

Red Line Policy: No development in Flood Risk Quadrants.

4. The “Agent of Change” Pays the Bill

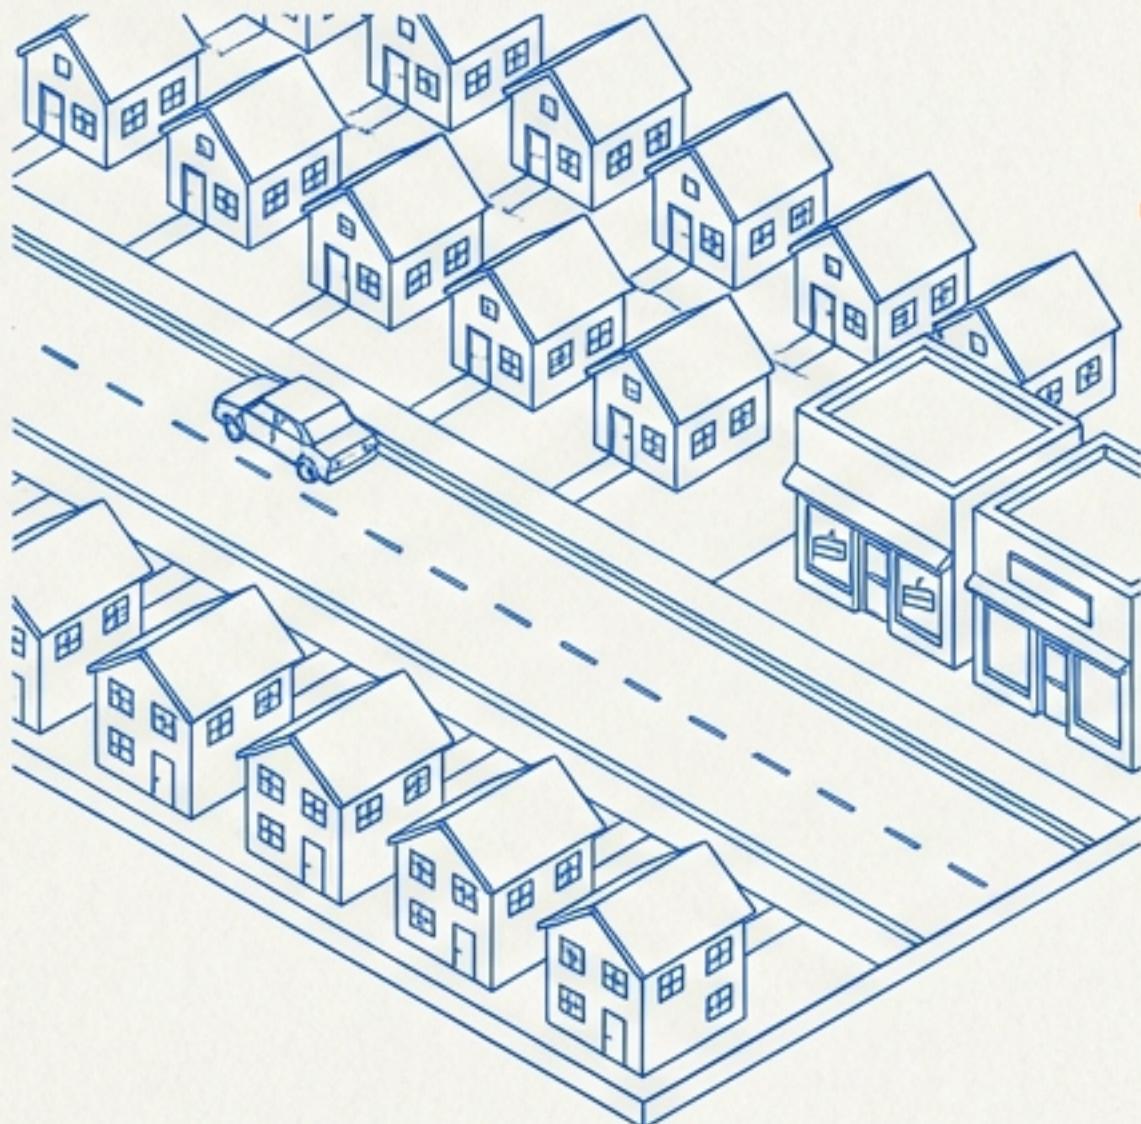

The Newcomer Principle

Whoever brings the new use (e.g., apartments next to a factory) pays for the mitigation. Existing industry cannot be sued for noise.

5. The Economics of “Positive Friction”

Why Pedestrians are More Valuable than Cars

Dormitory Suburb: Car, Empty Street, Closed Signs

THE LINGER FACTOR:
Pedestrians spend
66% MORE
at local businesses
than car-based
visitors.

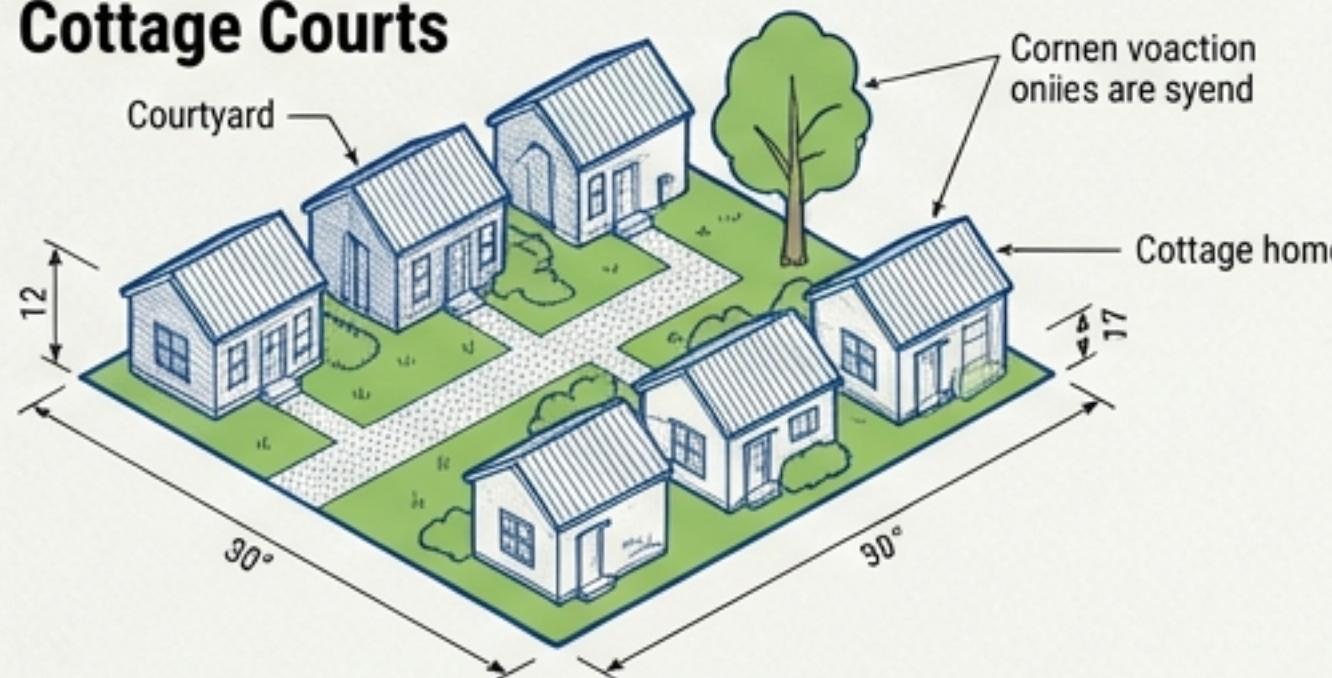

Complete Neighbourhood: Pedestrians, Open Cafe, Busy Street

Shift from “Retail Wastelands” to “Third Places”

6. The “Missing Middle” is the Economic Engine.

The Great Trade-Off

Source Serif Pro

Is Aotearoa Ready to Live Inside the Machine?

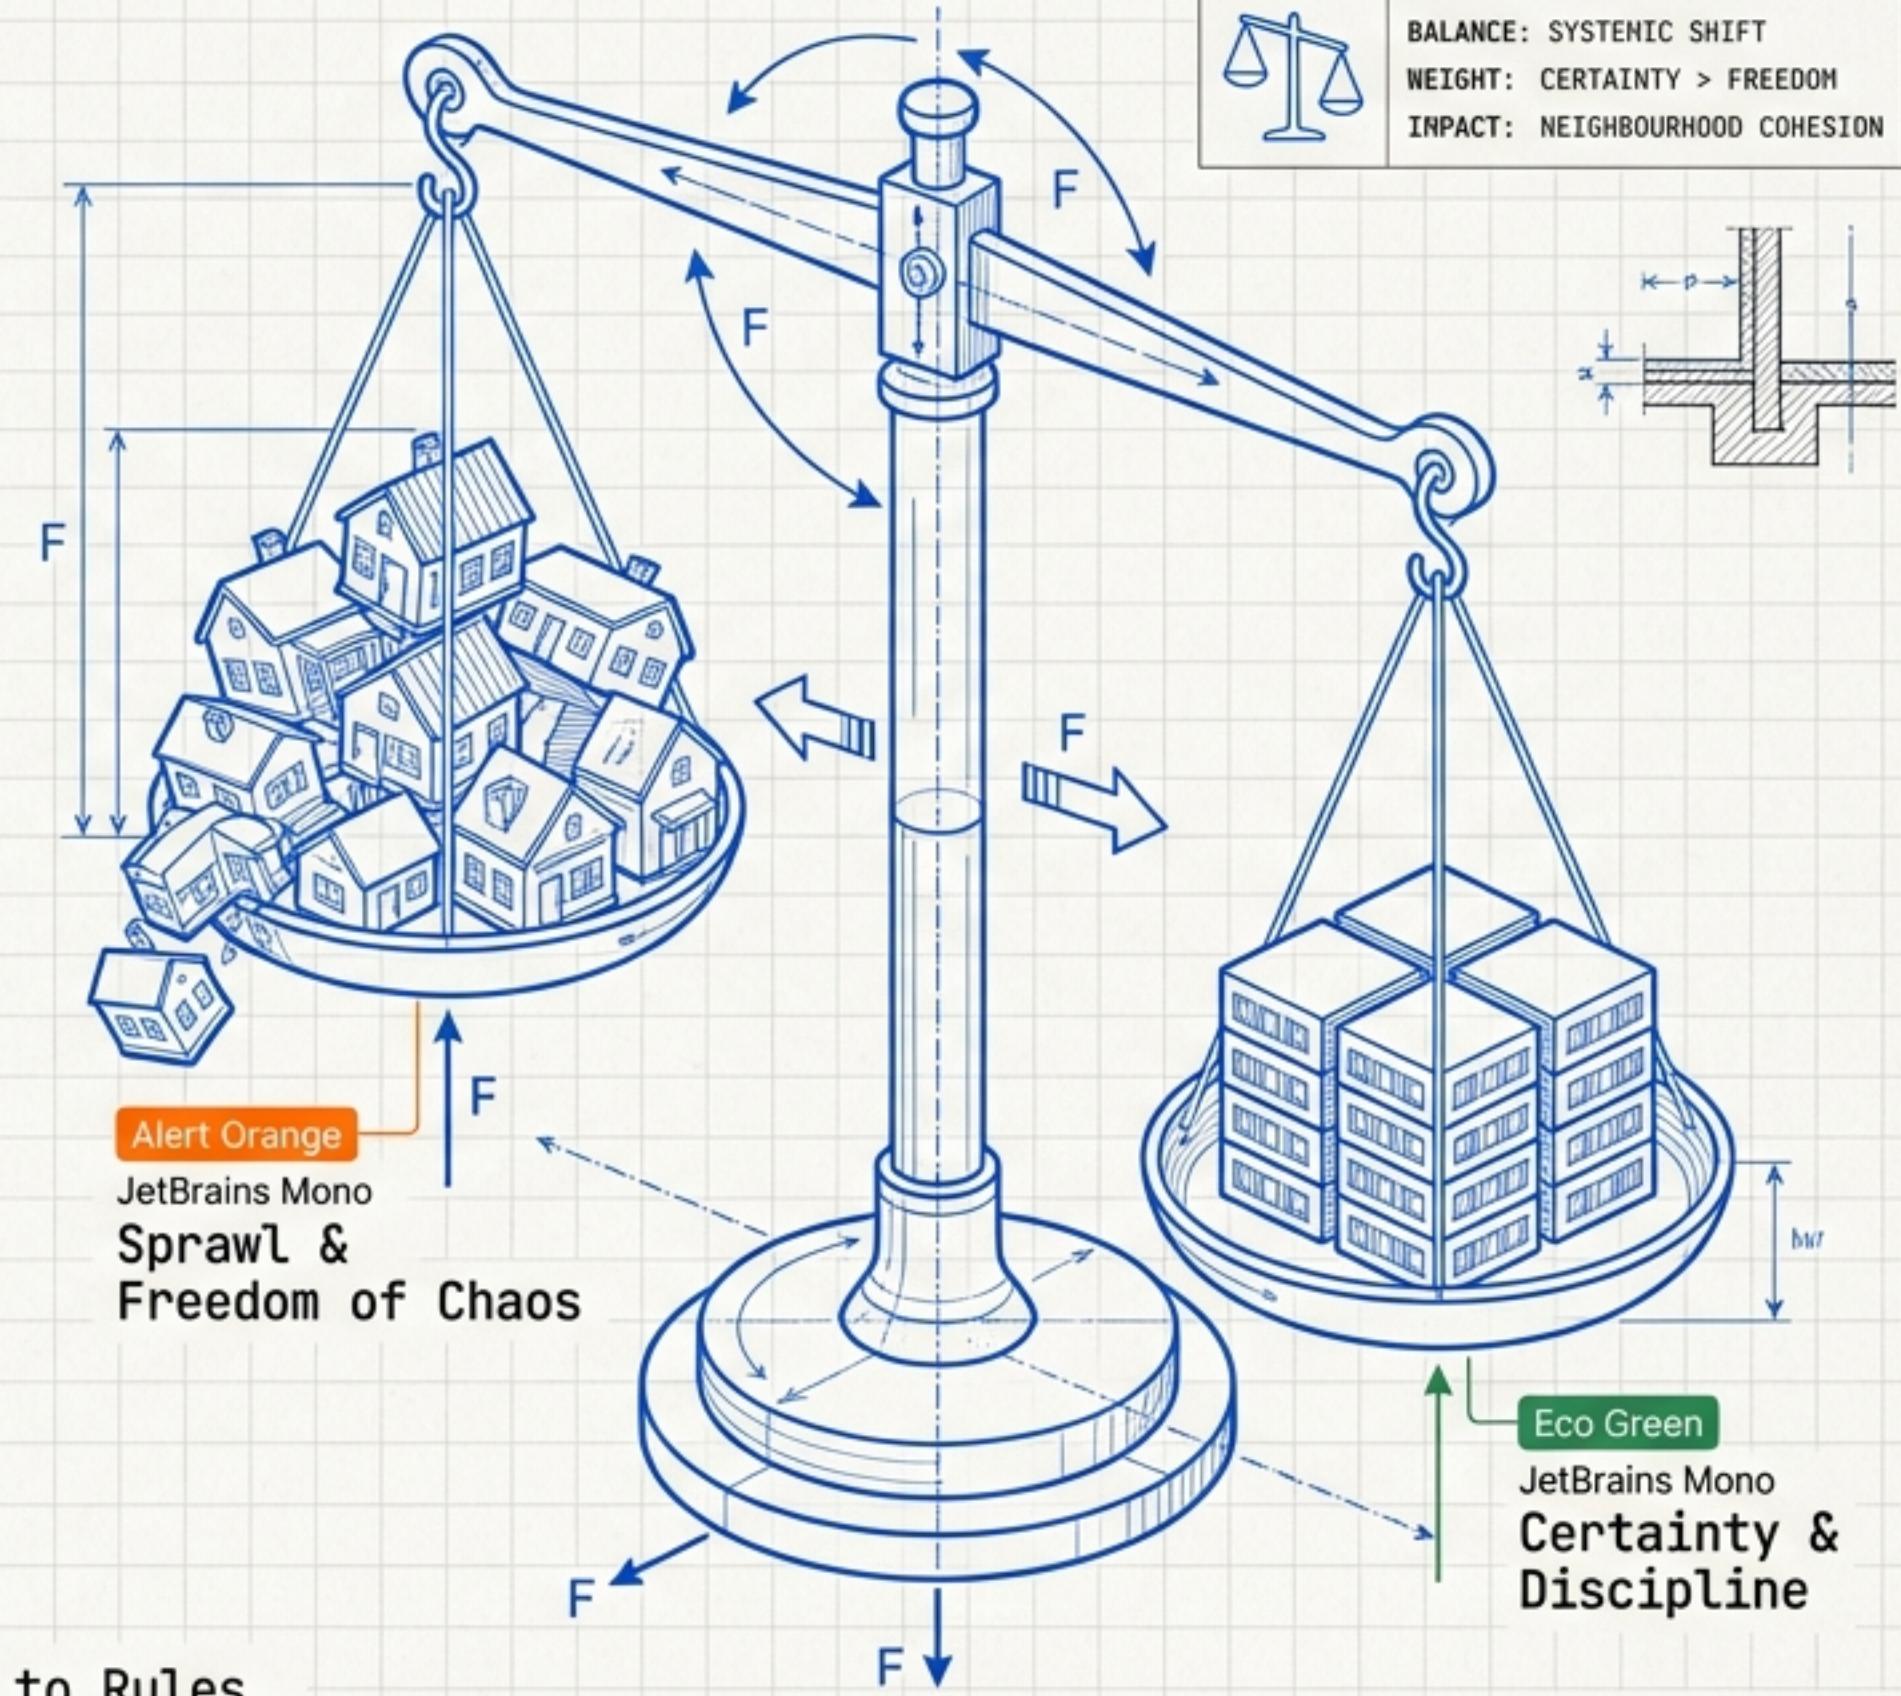

Source Serif Pro

To build the 'Complete Neighbourhood', we must exchange the 'Quarter Acre Dream' and bespoke planning for the discipline of a standardized system.

JetBrains Mono

Benefit: Certainty & Resilience. | Cost: Adherence to Rules.

| HUD / TECHNICAL SPECS | JetBrains Mono |
|---|--------------------------------|
|  | BALANCE: SYSTEMIC SHIFT |
| | WEIGHT: CERTAINTY > FREEDOM |
| | IMPACT: NEIGHBOURHOOD COHESION |

One Final Thought...

If our cities are software, what are the most important features we need to code into Version 2.0?

Support the shift from a Culture of Permission to a Culture of Adherence.
Everyday life should happen just outside your door.
